PARTICIPANTS' OPINIONS

61 answers

5

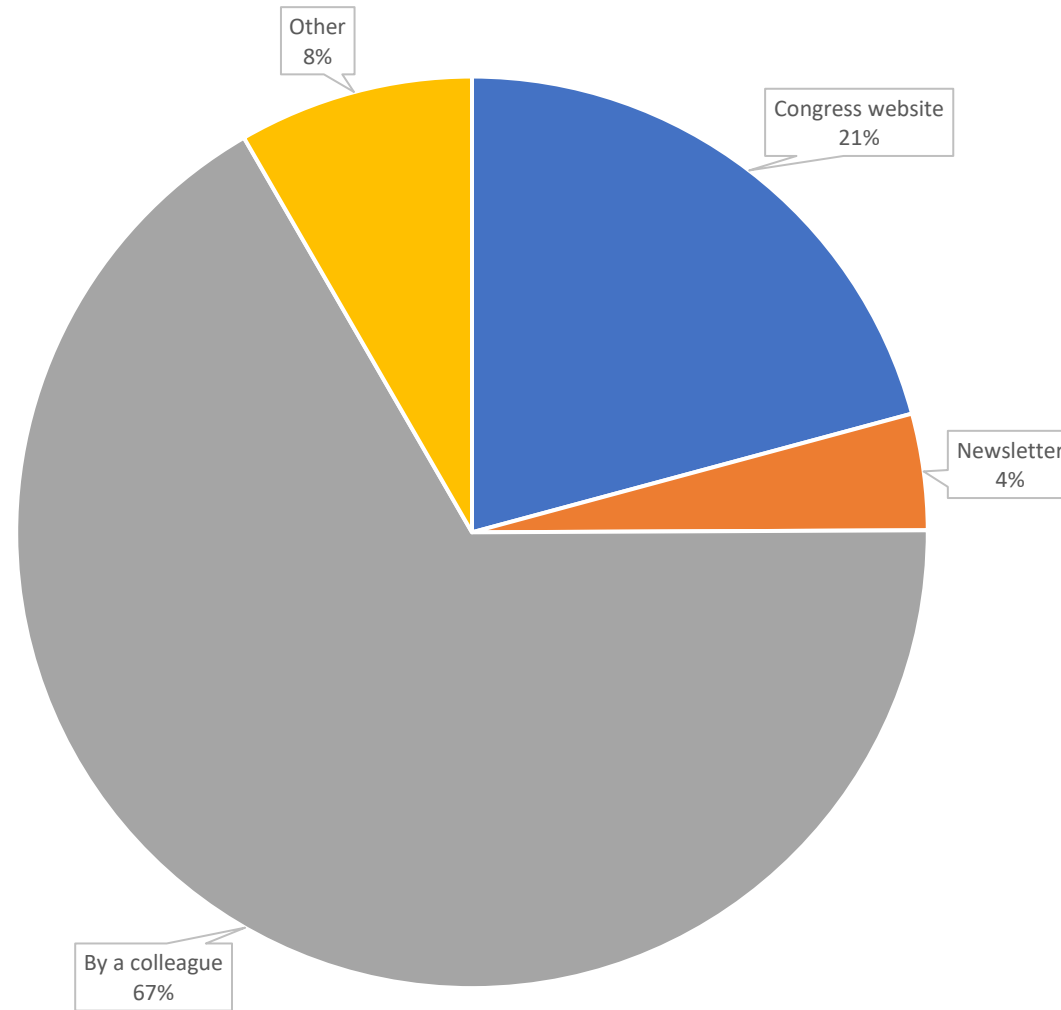

PARTICIPANTS' OPINIONS

a *EVALUATION OF THE ORGANISATION*

5

a

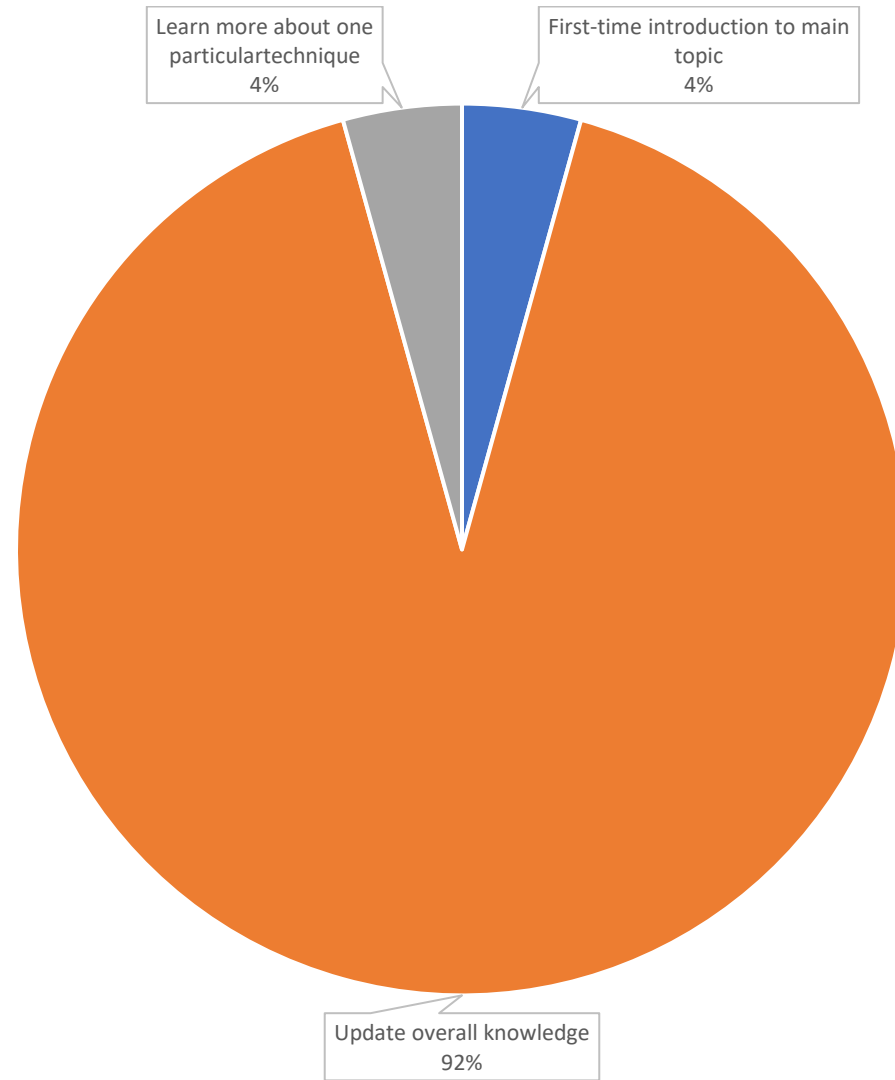

How did you learn about the congress?

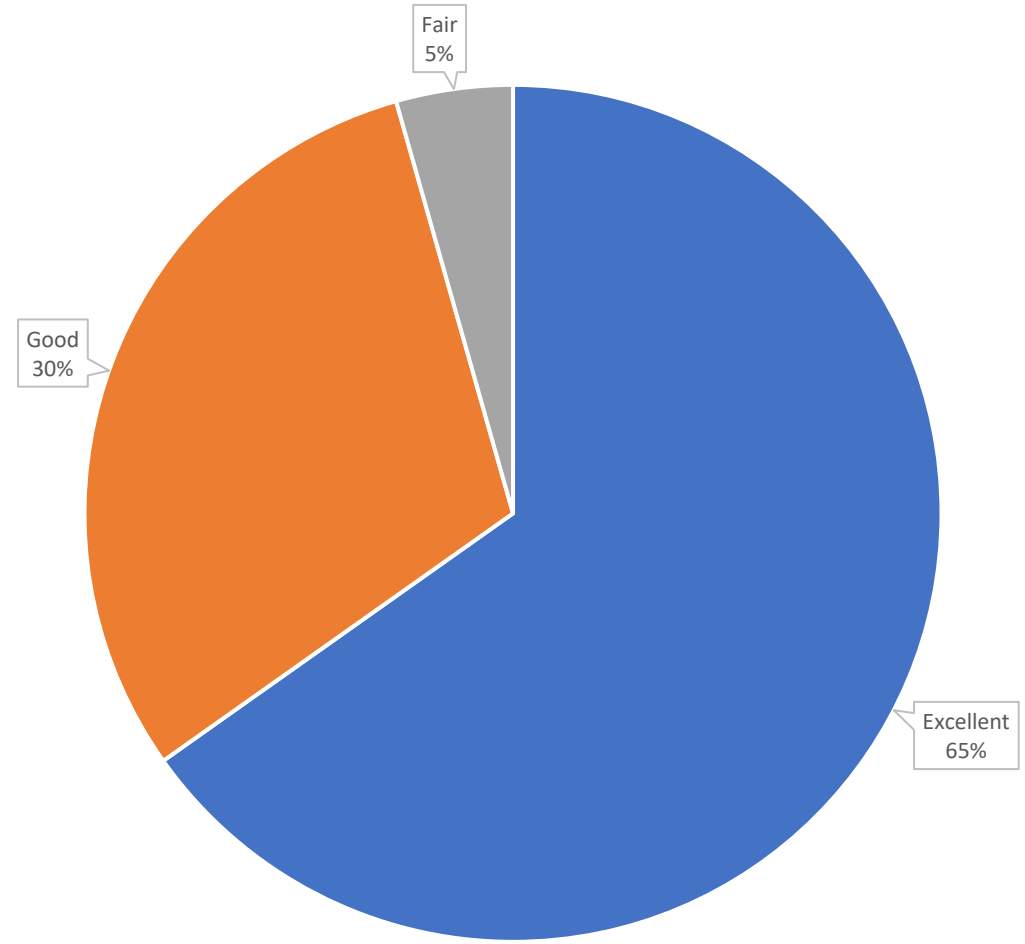

5

a

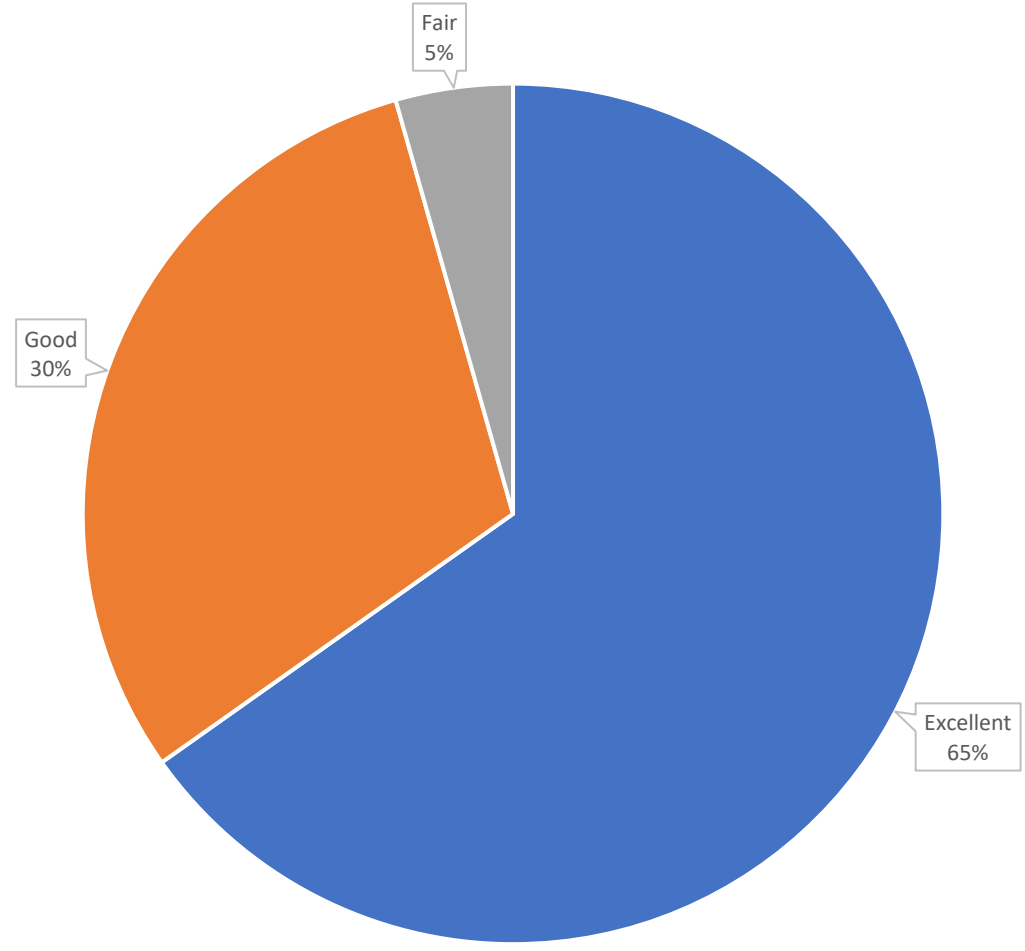

Primary reason for attending the conference

5 a Organization of the scientific programme

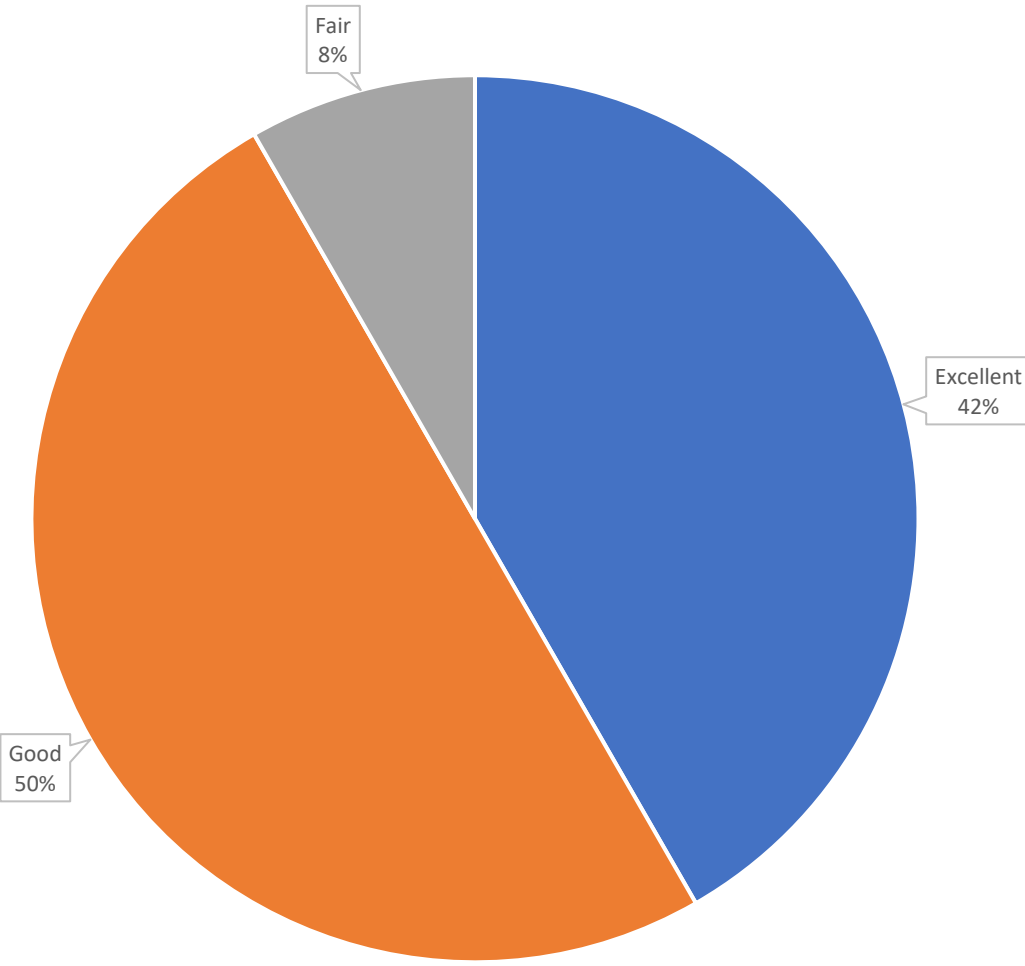

5 **a** **Overall rating of Congress**

5

a

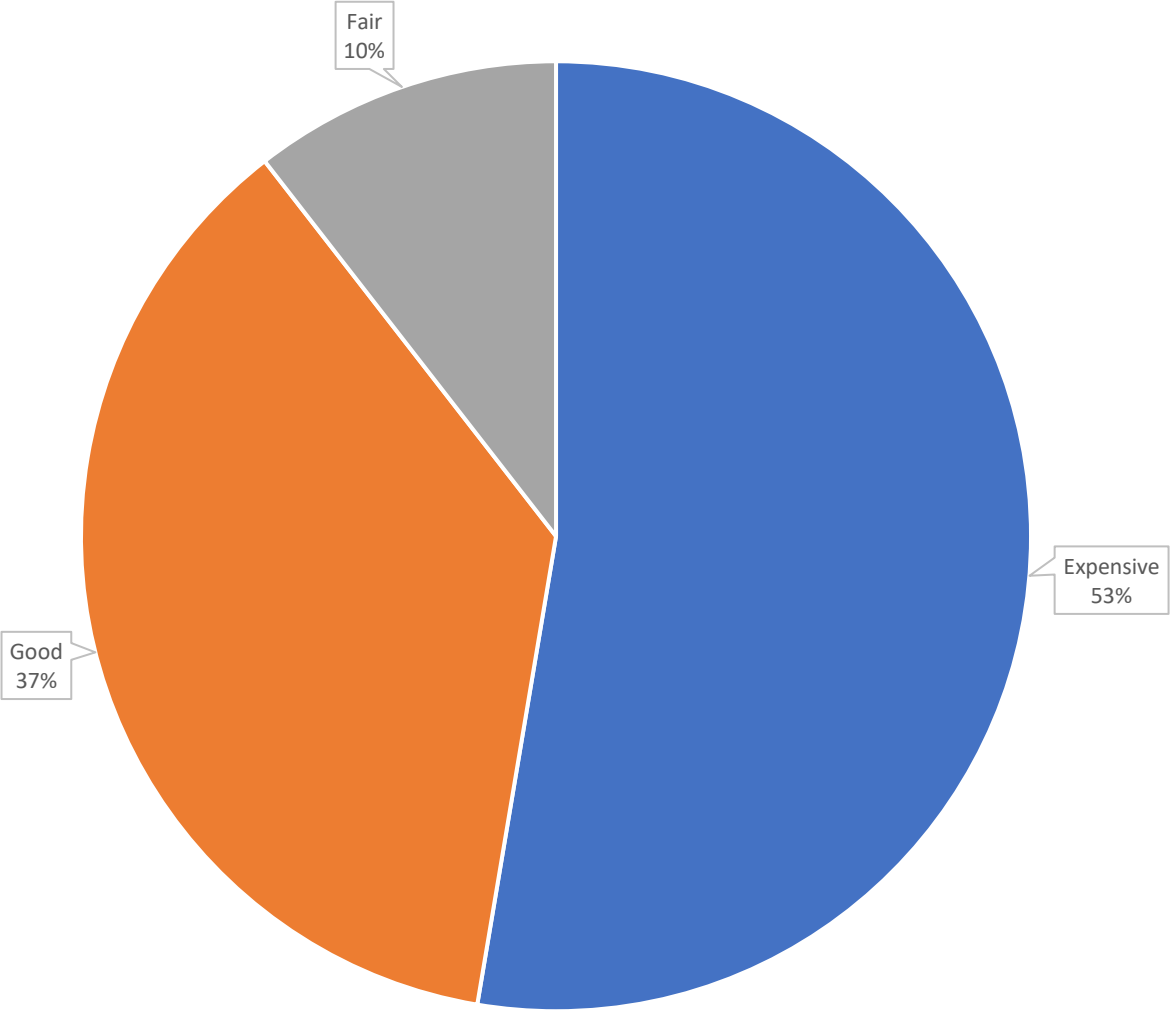

Hotel Accommodation - University Arms and Parker's Tavern, Cambridge

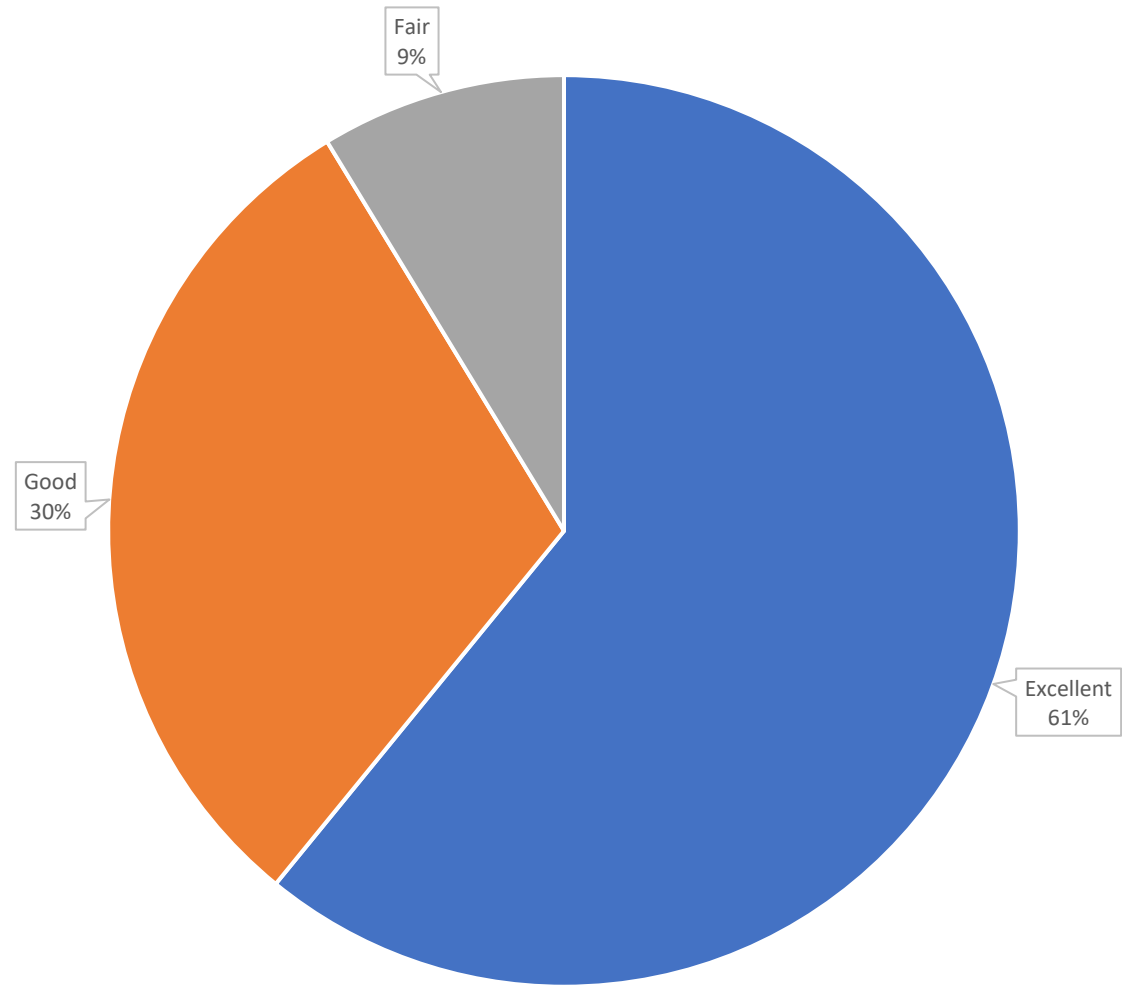

5

a

Congress Rates

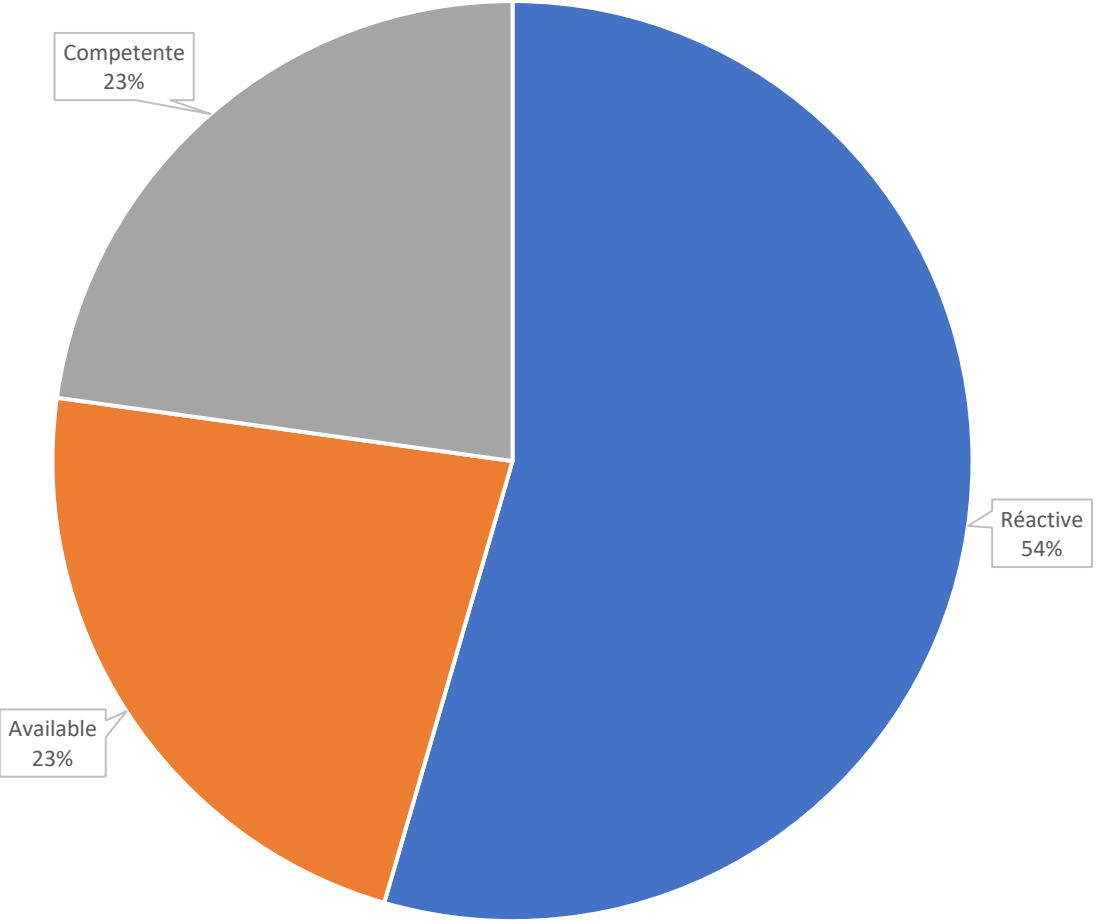

5 **a** Meeting facilities - Cambridge Union Society

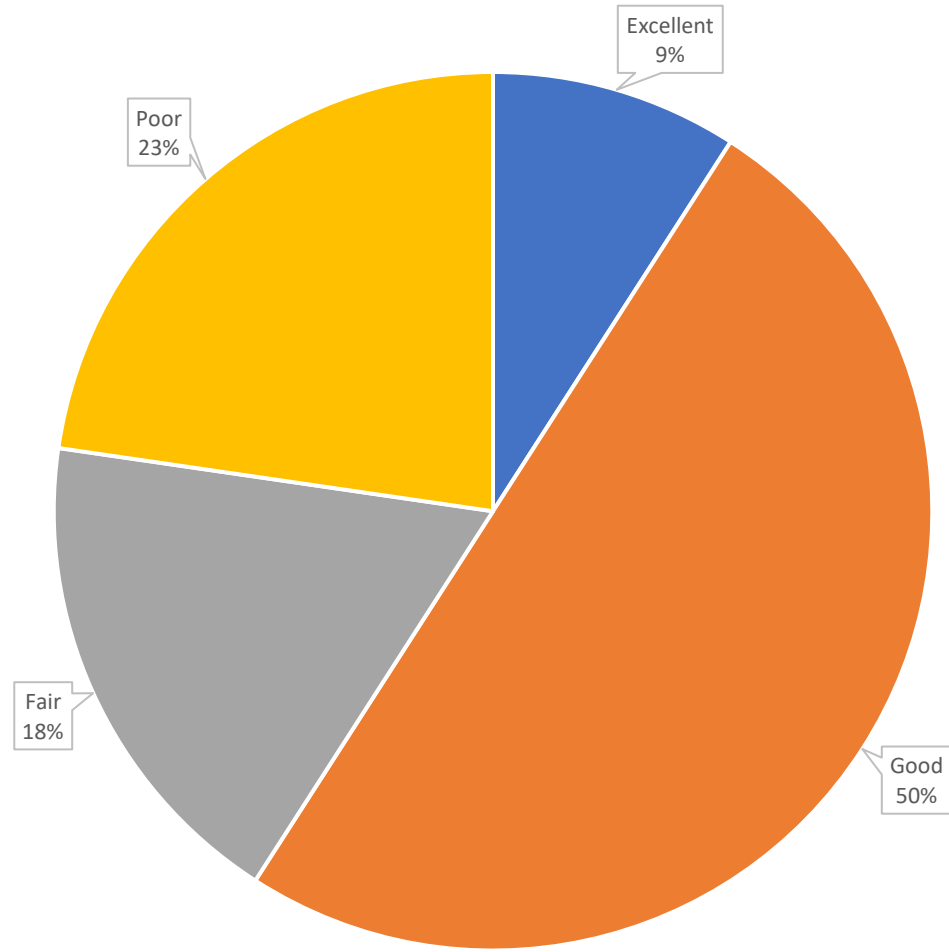

5

a

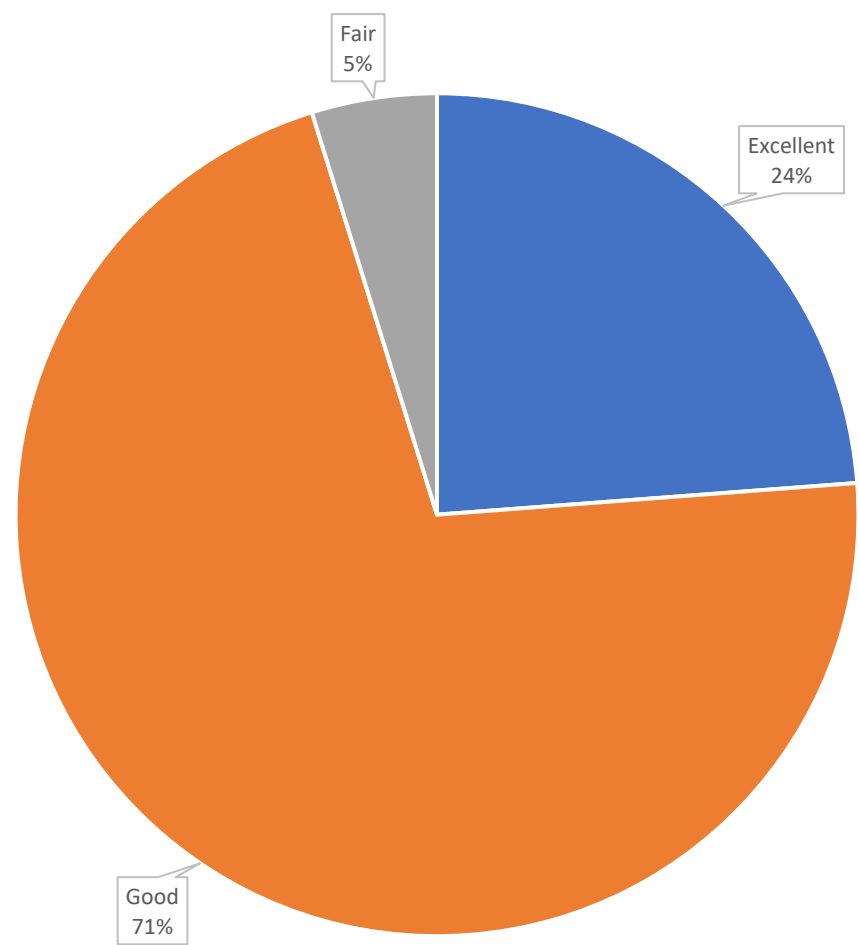

Congress staff - Divine ID

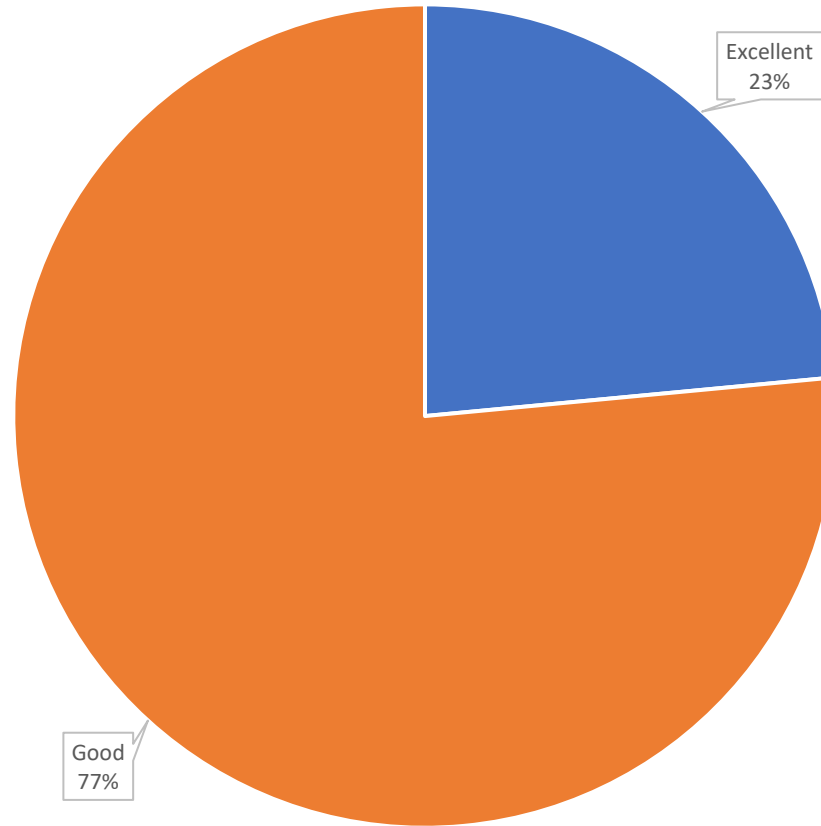

5 **a** **Congress catering Cambridge Union Society**

5 a What did you think about the Industry symposium GE - The role of cardiac CT / CT-TOE fusion in the planning of transcatheter intervention ?

5 a What did you think about the Industry symposium ABBOTT - MV & TV morphology for imaging specialists, interventional cardiologists and surgeons specimens & imaging ?

5 a What session of the scientific program did you most appreciate and why ?

- The debates were really amazing, interesting to listen to experts with different view points debate about the given topic
- Medical treatment to prevent progression of AV stenosis. We should try to focus more on preventing disease progression than just invasive treatments
- Surgery for asymptomatic aortic stenosis
- AVR for asymptomatic AS

5 a Please give a summary of the information you received which will be useful in your practise

- Imaging sessions, case presentations
- Learned the value of studying both aspects of a topic so better armed to give all information for patients when offering them procedures without clear cut evidence to support it over another
- It was interesting to hear about the disease staging, I found it particularly interesting that we should not just focus on guidelines and numbers, as every patient is an individual dealing with their co-morbidities such as HTN or optimal medical therapy can often go a long way.
- All information discussed is relevant and needs to be considered on a case by case basis because there is not sufficient grade 1 evidence to support a generic, unique best management option for all patients.

THANK YOU
